[가오즈항]

- 1. Complete AddTaskActivity in java/com.example.tabler folder (with activity_add_task.xml in res/layout folder)

Scenario : when click the add button(it is temporary image now), move to TablerActivity > AddTaskActivity and user can add subject to table.

Then user can add subject if the subject name is right, and cane move to AddTaskActivity, and can see add version.

Implement Moving : TablerActivity >> AddTaskActivity & TablerActivity << AddTaskActivity

and contents of TaskDetailActivity and activity_task_detail.

(To judge that subject name is right, you must implement text auto-complete application and text check with database's subject name.)
